

NAKKA SAI VENKATA DEEPTHI

Entry-Level Software Development Engineer | Java Full Stack Developer

Guntur, Andhra Pradesh | +91 9014445419 | venkatasaideepthi3@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Entry-level Software Development Engineer with experience designing and implementing full-stack web applications using Java, Spring Boot, React.js, SQL, and REST APIs. Completed a Java Full Stack internship improving API performance by 15% and reducing MySQL query latency by 25% through backend optimization and query tuning. Applied software engineering principles, OOP, data structures and algorithms, DBMS, and SDLC in Agile/Scrum environments with CI/CD and Docker-based deployments. Builds reliable, maintainable backend and full-stack systems using Java, Spring Boot, React.js, SQL, REST APIs, and AI-assisted development tools.

Technical Skills

Languages: Java, JavaScript, Python, SQL

Backend: Spring Boot, Spring Framework, REST APIs, Node.js, Express.js

Frontend: React.js, HTML5, CSS3

Databases: MySQL, MongoDB

Tools & Practices: Git, GitHub (version control systems), Docker, Maven, Postman, CI/CD pipelines, API testing and debugging

Software Engineering: Data Structures & Algorithms, OOP, Design Patterns (MVC, Repository), SDLC, Agile/Scrum, database schema design, software testing, troubleshooting, application development

AI & Emerging Tech: Generative AI, prompt engineering, AI chatbot integration, AI agents (Google ADK), GenAI-driven developer tools

Experience

Java Full Stack Developer Intern — Miracle Software Systems, Vizianagaram | May 2025 – Jun 2025

- Designed, developed, and tested Spring Boot REST APIs using Controller–Service–Repository architecture, delivering secure, maintainable backend services for enterprise-style software applications.
- Optimized microservice business logic and request-processing workflows, improving API response performance by approximately 15% and strengthening scalability of backend services.
- Tuned MySQL queries and added indexes on frequently accessed tables, reducing query response time by around 25% on production-style datasets and enhancing overall application throughput.
- Executed API testing, validation, troubleshooting, and defect analysis using Postman, supporting zero critical defects during internal review cycles and reinforcing software quality.
- Collaborated with developers and QA in Agile sprints, contributing to defect triage, regression testing, knowledge sharing, and Docker-based CI/CD deployment activities.

Projects

Clean Street – AI-Enabled Civic Issue Tracking Platform | React.js | Spring Boot | MySQL | REST APIs

- Built a full-stack civic issue tracking platform enabling real-time issue reporting, geolocation-based tracking, image uploads, and escalation workflows.
- Defined REST APIs, relational schemas, and role-based access control for scalable issue management, supporting admin dashboards and severity-based analytics.
- Integrated a Generative AI–powered chatbot using prompt engineering and AI agents to automate issue triage and user assistance, reducing manual support effort and accelerating initial response time for user queries.

Online Code Execution Platform | React.js | Node.js | Judge0 API

- Developed a browser-based online code execution platform using React.js, Node.js, and Judge0 API, supporting sandboxed execution of 10+ programming languages for coding practice and algorithm testing.
- Implemented responsive user interfaces and optimized frontend–backend communication to keep execution latency low and provide a stable, real-time code testing experience.

QuickLink – Scalable URL Shortener | Node.js | Express.js | MongoDB

- Implemented REST APIs for URL shortening, redirection, and click analytics using Node.js, Express.js, and MongoDB, enabling creation and management of short links for web applications.
- Designed MongoDB data models and backend services following clean architecture principles, maintaining clean schemas, predictable APIs, and scalable data persistence.

Education

B.Tech – Computer Science & Engineering (IoT) | CGPA: 8.27 / 10

R.V.R. & J.C. College of Engineering, Guntur | 2022 – 2026

Relevant Coursework: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Software Engineering, System Design

Certifications & Achievements

- Google Cloud Gen AI Academy (APAC) — AI Agents using Agent Development Kit (ADK)
- Java Full Stack Development — Wipro TalentNext; Infosys Springboard
- Databases for Developers: Foundations — Oracle Dev Gym; SQL (Basic) — HackerRank
- HackerRank Java Silver Badge; 250+ DSA problems solved.
