The Hiring Team

EY Global Delivery Services – Consulting, India

Dear Hiring Team,

The Testing Services role at EY GDS aligns directly with the work I have been building toward — functional testing, business requirements validation, and software quality assurance within an enterprise consulting environment. I am a final-year B.Tech CSE graduate with hands-on experience in SDLC, Java, SQL, REST API testing, and Agile delivery.

At Miracle Software Systems, I designed and executed functional, integration, regression, and UAT test scenarios across 15+ API endpoints using Postman, JUnit, and Mockito, improving defect detection before deployment. I also performed SQL-based data validation in MySQL and optimised queries that reduced API response times by 25%, while collaborating in Agile sprints for requirement analysis, defect tracking, and release support.

EY's focus on Banking and Capital Markets technology and structured consulting delivery is exactly the environment where I want to start my career. I would welcome the opportunity to discuss how my testing and QA skills can contribute to EY GDS, and I am available immediately and willing to relocate.

Respectfully,

Nakka Sai Venkata Deepthi
