

NAKKA SAI VENKATA DEEPTHI

Java Full Stack Developer | Spring Boot | REST APIs | React.js | Generative AI
Guntur, Andhra Pradesh | +91 9014445419 | venkatasaideepthi3@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Software Developer with hands-on experience building backend and full-stack applications using Java, Spring Boot, React.js, MySQL, MongoDB, and RESTful APIs. Completed a Java Full Stack internship where I improved API performance and optimized database queries in an enterprise-style environment. Built AI-enabled applications that integrate Generative AI chatbots, prompt engineering, and AI agent workflows using Google Agent Development Kit (ADK). Comfortable using AI-assisted development tools and automation workflows to debug faster, improve code quality, and iterate on features. Motivated to contribute to product engineering teams using Java, Spring Boot, microservices, and AI-first workflows to build scalable, production-grade software.

Technical Skills

- **Languages:** Java, JavaScript, Python, SQL
- **Backend:** Spring Boot, Spring Framework, RESTful APIs, Microservices (basics), Node.js, Express.js
- **Frontend:** React.js, HTML5, CSS3, JavaScript
- **Databases:** MySQL, MongoDB, SQL/NoSQL database design
- **AI & Emerging Tech:** Generative AI, OpenAI APIs, AI-assisted development, Prompt Engineering, AI Agent Development (Google ADK), Automation Workflows, LLM Integration
- **Tools & Practices:** Git, GitHub, Docker, Maven, Postman, CI/CD pipelines, Linux (CLI basics), Agile/Scrum, API testing and debugging
- **Engineering:** Data Structures & Algorithms, OOP, Design Patterns (MVC, Repository), SDLC, database schema design, software testing

Projects

Clean Street – AI-Enabled Civic Issue Tracking Platform *React.js | Spring Boot | MySQL | REST APIs | Generative AI*

- Built a full-stack civic issue tracking platform in a 4-member team, taking ownership of backend APIs and AI integration to enable citizens to report, track, and escalate civic issues through a centralized web application.
- Developed RESTful APIs, relational database schemas, and role-based access control using Spring Boot and MySQL for admin dashboards, severity-based analytics, multi-role workflows, geolocation-based issue tracking, image uploads, and escalation flows to improve transparency and reduce manual intervention.
- Integrated a Generative AI-powered chatbot using prompt engineering and AI agent concepts (Google ADK) to automate issue triage and user support, reducing manual support effort and improving initial response times.

Online Code Execution Platform *React.js | Node.js | Judge0 API | JavaScript*

- Developed a full-stack, browser-based code execution platform using React.js, Node.js, and Judge0 API to support sandboxed compilation and execution in 11+ programming languages.
- Optimized frontend-backend communication and API usage to maintain low execution latency for algorithm practice and testing.
- Designed modular React components for the editor, input/output handling, error reporting, and results visualization.

QuickLink – Scalable URL Shortener *Node.js | Express.js | MongoDB | REST APIs*

- Implemented RESTful APIs for URL shortening, redirection, and click analytics using Node.js, Express.js, and MongoDB.
- Designed MongoDB data models and backend services following clean architecture principles to ensure predictable API behavior and scalable data persistence.

Experience

Java Full Stack Developer Intern — Miracle Software Systems, Vizianagaram *May 2025 – Jun 2025*

- Developed and maintained Spring Boot REST APIs using Controller–Service–Repository architecture, delivering secure and scalable backend services and improving average API response time by approximately 15%.
- Reduced MySQL query latency by around 25% by tuning SQL queries and adding indexes on frequently accessed tables, increasing throughput on production-style datasets.
- Performed API testing and defect analysis using Postman (zero critical defects), worked in Agile/Scrum sprints for defect triage, regression testing, code reviews, and Docker-based CI/CD deployment, and used Git/GitHub for version control plus AI-assisted workflows to speed up code reviews, refactoring, and debugging.

Education

B.Tech – Computer Science & Engineering (IoT) | CGPA: 8.27 / 10

R.V.R. & J.C. College of Engineering, Guntur | 2022 – 2026

Relevant Coursework: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Software Engineering, System Design

Certifications & Achievements

- Google Cloud Gen AI Academy (APAC) — AI Agents using Agent Development Kit (ADK); Databricks Generative AI Fundamentals
- Java Full Stack Development — Wipro TalentNext; Software Engineering — Infosys Springboard
- Databases for Developers: Foundations — Oracle Dev Gym; SQL (Basic) and Java Silver Badge — HackerRank
- Solved 250+ Data Structures and Algorithms problems across LeetCode, HackerRank, and CodeChef; completed Microsoft Azure and Deloitte/Forage virtual experience programs.
